CONFERENCE ANNOUNCEMENT

Conference on MANAGING R&D EFFECTIVELY

to be held at **Manchester Business School 10—12 July 1985**

This is a preliminary announcement and call for papers for the above conference. Topics expected to be covered:

| | |
|-----------------------|------------------------|
| Policy and objectives | Organizational Climate |
| Allocating resources | Communication |
| Planning | Knowledge Engineering |
| Control | |

and other matters bearing on the management of research and development resources.

Abstracts of papers by 28 February 1985 and completed papers by 31 May 1985. All papers submitted will be considered for publication in the journal R&D Management. Some support for overseas academics may be available from the journal scholarship fund.

For further details write to: Mrs. K. M. Eatough,
R&D Research Unit,
Manchester Business School,
Booth Street West,
MANCHESTER M15 6PB,
United Kingdom.

INVERESK RESEARCH INTERNATIONAL MANAGEMENT and COMPUTER SERVICES in R & D OPPORTUNITIES in RURAL SCOTLAND

IRI is a major independent biomedical contract research laboratory undertaking investigations on a wide range of pharmaceuticals and other products for clients worldwide. The development of computer systems for scientific and management applications and the input of business management expertise are growing requirements within the Company. Two positions in Commercial Operations now require to be filled.

OPERATIONAL SUPPORT and COMPUTER SERVICES

This involves responsibility for the management and development of micro- and mini-computer systems in use in various scientific areas of the Company and the provision of support to managers in the use of management systems to improve operational efficiency. Suitably qualified candidates would also take responsibility for a small statistical services group. (Reference: 5601)

BUSINESS SUPPORT MANAGER

This position will provide business support to selected scientific areas within the Company to improve operational efficiency and commercial performance. (Reference: 5602)

For both positions, applicants should possess a degree or equivalent qualification in a numerate discipline, have knowledge of OR, operations management or other business management methods and have several years practical experience, preferably in the biomedical field.

For the former post, applicants should have extensive experience within a computer group. A background in statistics would also be useful though not essential.

For the latter post, applicants should be able to work effectively with scientists from a range of disciplines and wish to pursue a managerial career.

Salary for both of the above appointments will be dependent upon qualifications and experience. In addition, the Company offers modern staff benefit schemes, including free BUPA membership, and pleasant working conditions in a rural setting close to Edinburgh. Relocation assistance may also be provided, where appropriate.

Full details in writing, for either of the above appointments, should be forwarded, in confidence, to the **Personnel Department, Inveresk Research International Ltd, Inveresk Gate, Musselburgh EH21 7UB**, quoting the appropriate reference number.

Polity Press

A Selection of Autumn Titles

Networks of Corporate Power

Edited by F N Stokman, R Ziegler
and John Scott

This volume is the outcome of a six-year research project involving collaborative research by teams based in a variety of countries in Europe and America. It applies techniques of social network analysis to data collected on the top companies in ten countries, presenting a detailed comparative analysis. The material will make a major contribution to current debates on intercorporate structure.

c £25.00 hardback 0 7456 0115 4

Directors of Industry

John Scott and Catherine Griff

An investigation of the changing structure of business relations in Britain. This is the first book to use interlocking directorships in a systematic way to explore the fundamental issues in the analysis of business. Models of finance capital, resource dependence, bank control, and class cohesion are discussed. It is argued that their merits can be assessed only on the basis of a network approach to intercorporate relations.

Chapters investigate the concentration of capital; internationalisation; the public and industrial sectors; regionalism; the business links created by kinship; the role of banks in intercorporate networks and the inner circle of financiers who sit on their boards.

c £19.50 hardback 0 7456 0019 0

Polity Press, 108 Cowley Road, Oxford OX4 1JF

Managing with Micros

Management Uses of Microcomputers

COLIN LEWIS

Managing with Micros has rapidly established itself as the leading book in its field: 'Up-to-date, very specific, very practical. This is the best book we have found so far on introducing and using micros in business.' *Wyvern Business Library*
'Very practical and up-to-date guide to a fast developing field.' *British Business*
(Second edition) 208 pages, hardback **£12.50** (0 631 13922 2)
paperback **£6.95** (0 631 13694 0)

Mathematical Methods for Economists

Third Edition

STEPHEN GLAISTER

This highly successful textbook has been thoroughly revised and updated. It now includes simple computer programs to help explain points of principle, and to provide further practical and relevant illustrations of the uses to which the techniques may be put.

272 pages, paperback **£7.50** (0 631 13712 2)

The Regulation Game

How British and West German Companies Bargain with Government

Edited by ALAN PEACOCK

The remarkable growth of the public sector relative to the rest of the economy has been accompanied by increasing government intervention in the private sector. The regulations imposed on companies raise important questions about the efficient conduct of economic policy. This book examines the impact of such regulations.

176 pages, **£17.50** (0 631 13785 8)

Markets and Macroeconomics

Macroeconomic Implications of Rational Individual Behaviour

SCOTT MOSS

This book takes issue with monetarists, new classical macroeconomists and Keynesians, and demonstrates a new approach to macroeconomic theory and policy formulation. The originality of the theoretical analysis lies in the fact that the characteristics of different markets, particularly the forces that determine prices, are deduced from the assumption that individuals behave rationally. In previous theories, market forces are merely assumed.

368 pages, **£19.50** (0 85520 765 6)

Basil Blackwell

The Robotics Revolution

A Complete Guide for Managers and Engineers

PETER B. SCOTT

The robotics revolution is now hard technological fact, and the transformation of outmoded industrial processes is well under way. This book is the complete guide for all affected. Written clearly and with the non-specialist in mind, it introduces all important aspects of the subject.

352 pages, **£19.50** (0 631 13162 0)

The Future of Work

CHARLES HANDY

Whatever politicians say, the world of full-time employment for all has vanished forever, and Charles Handy here faces up to the facts and to the *positive* possibilities of the future. He examines the education of the workforce of the future, and how to organize it, and calls for a re-examination of our priorities, and a wider perspective on this critical question.

216 pages, hardback **£16.50** (0 85520 688 8)

paperback **£4.95** (0 85520 689 6)

What is Political Economy?

Edited by **DAVID WHYNES**

What significance does the term 'political economy' have for modern economics? In this book eight expert contributors, including Arun Bose, Bruno Frey and Martin Hollis examine themes and specific issues in political economy, exploring its history, implications and relevance.

256 pages, **£19.50** (0 85520 746 9)

Unions on the Board

An Experiment in Industrial Democracy

ERIC BATSTONE, ANTHONY FERNER and MICHAEL TERRY

Industrial democracy, and particularly the idea of having representatives of the workers on the board, has been much discussed but has rarely been put into practice in a major enterprise. This book discusses the experience on the board of the Post Office.

206 pages, hardback **£15.00** (0 631 13317 8)

paperback **£5.95** (0 631 14661 4)

Basil Blackwell

Introduction to Economics

An Integrated Approach to Fundamental Principles

JOHN CRAVEN

The key feature of this important new textbook is its integrated approach: macroeconomic themes are built from their microeconomic foundations. It is clear that teachers are now asking for a text which approaches the subject in this way, and this is the first book to do so.

560 pages, hardback **£25.00** (0 631 13636 3)

paperback **£8.50** (0 631 13637 1)

Unemployment and Inflation

An Introduction to Macroeconomics

C.V. BROWN

Unemployment and inflation are the two most important economic problems facing industrialized countries, but, argues C.V. Brown, conventional textbooks do not offer an adequate explanation of their inter-relationships. He uses a readily comprehensible model of aggregate supply and demand and offers a unified explanation of employment output and price level changes.

416 pages, hardback **£27.50** (0 85520 722 1)

paperback **£8.95** (0 85520 723 X)

Economics in Disarray

Edited by **PETER WILES** and **GUY ROUTH**

This book presents a serious challenge to orthodox economic theory. In a series of profound critiques prominent scholars show up the flaws in its underlying assumptions, each attack being accompanied by a defence of neo-classical tradition.

368 pages, **£22.50** (0 631 13433 6)

The Resourceful Earth

A Response to Global 2000

Edited by **JULIAN L. SIMON** and **HERMAN KAHN**

The Resourceful Earth challenges the claims made by *Global 2000*, and presents solid scientific evidence that sets the record straight. An independent team of world experts demonstrates that on the basis of present trends the world in 2000 will be less crowded, less polluted, more ecologically stable and less vulnerable to resource-supply disruption than it is today.

608 pages, **£14.95** (0 631 13467 0)

Basil Blackwell

Instructions to Contributors

Articles will be chosen for their contribution to the field of R&D management. They should aim to throw light on important problem areas and should be written in such a way as to be of interest and value to people responsible for managing scientific activity. Preference will be given to papers describing problem areas to which attention is currently being paid and to the applications of new methods of management in those areas.

A paper is submitted to referees upon receipt. The editors will do all they can to expedite the reviewing process and ensure that their decision is reached with the minimum of delay. However, submission of a paper to the journal is taken to imply that (a) the paper has not been previously published in the open literature, and (b) it is not currently being considered by other journals for publication, nor within three months of submission to this journal will it be submitted to other journals, and only then with prior notice to the journal editors.

All papers should be typewritten, preferably on A4 paper, with double spacing and wide margins. They should not normally exceed 5,000 words and specialist terminology and footnotes should be avoided. Mathematical analysis and statistical data should be placed in appendices wherever possible. The priorities of headings and sub-headings should be clearly indicated. Paragraphs may be numbered, using decimal points to indicate the hierarchy. If the numbers are not to be reproduced in print they should be enclosed in square brackets. Numbered tables, figures and illustrations should have their intended position in the printed text clearly indicated, e.g. (Table 1 here).

The contribution of the author(s) should be a completely original one, it should in no way

violate any existing copyright, and it should contain nothing of a libellous or scandalous character.

Books and articles should be referred to in the text by the author's name(s) and date of publication, e.g. Baker & Pound (1964). Full references should be included at the end of the paper in alphabetical order using the following convention:

Baker, N. R. & Pound, W. H. (1964) 'R&D project selection: where we stand', I.E.E.E. Transactions on Engineering Management, Vol. EM-11, 124-134.

Price, D. J. (1936) 'Little Science, Big Science', New York and London: Columbia University Press.

A paper must be preceded by an abstract, preferably of not more than 150 words. It should state briefly why the work reported was done, how it was carried out, what are the most important conclusions and what are their implications for R&D managers. Suggested keywords should be added at the end to increase the probability of citation retrieval in computerised systems.

Three copies of all papers should be sent to the editors. The author's name(s) should only appear on the title page, which will be detached from the paper before referees' comments are invited.

Books in relevant fields should be sent to Dr. R. C. Parker, Pear Tree Cottage, Berkhamsted Place, Berkhamsted, Herts. HP4 1HQ.

Twenty offprints of each published paper will be supplied free of charge, covered in the journal cover. Additional offprints are available at reasonable rates, if ordered at the time that proofs are returned.

The Information Technology Revolution

Edited by **TOM FORESTER**

One of the areas of greatest technological development has been in the provision of information – now a major growth industry. In this book the most prominent people in the field look at the present state and future development of information technology.

448 pages, hardback **£27.50** (0 631 13433 0)

paperback **£8.50** (0 631 13438 7)

Econometrics and Quantitative Economics

Edited by **DAVID F. HENDRY** and **KENNETH F. WALLIS**

Although quantitative techniques are an indispensable part of the contemporary economist's tools of analysis, much econometric modelling is misguided and misinformed. This important new book, edited by two outstanding econometricians, consists of specially commissioned articles on all aspects of modelling.

352 pages, **£22.50** (0 631 13797 1)

Mass Unemployment

EDMOND MALINVAUD

This book develops an altogether new approach to unemployment. Clearly and concisely, it describes the many dimensions of mass unemployment, and, rejecting traditional models, presents a new macroeconomic analysis.

128 pages, **£12.50** (0 631 13704 1)

The Economics of John Hicks

Selected with an Introduction by **DIETER HELM**

'There can be no doubt that Sir John Hicks is one of the most distinguished economists of the twentieth century. He has had a tremendous influence on economic thought.' Milton Friedman

This selection of his essays, spanning half a century, contains the most important work of Sir John Hicks. Chosen with the economics undergraduate in mind, they are accompanied by a substantial introduction which assesses Sir John's contribution.

312 pages, paperback **£7.95** (0 631 13616 9)

Basil Blackwell
